

HAND HELD IR THERMOMETER

This easy-to-use device allows you to instantly measure surface temperatures anywhere in your Wood Stone oven. Just point the hand-held unit at the surface in question and press the button; the temperature is instantly displayed on an LCD readout. The button can be held down for scanning surfaces. The meter takes a reading every half second and has accuracy of plus or minus 3 degrees Fahrenheit and a range of 0 to 750 degrees Fahrenheit.

This tool allows a chef to precisely locate and monitor the various temperature zones within a stone hearth oven.

The meter is powered by one 9V battery and is built of high-impact plastic for long life. All your cooks will want one so plan to buy a few.

WS-TL-IRT

Measure the moisture content of your fuelwood with Wood Stone's easy-to-use Moisture Meter.

MINI-LIGNO E WOOD MOISTURE METER

WS-TL-MM

Dry wood burns more cleanly and releases more BTU's for better cooking with less creosote.

Wood Stone's Mini-Ligno E instantly measures the moisture content of any type of wood. Just press the probes into the surface of a piece of wood and the meter automatically displays the percent moisture. The easy-to-read scale ranges from 6 percent to 36 percent. An extra (longer) set of probes is included with the meter. The meter uses one 9 Volt battery (good for 5,000 readings) and automatically calibrates for decreasing battery voltage.

The meter and the cap are built of high-impact plastic for years of use. The cap, when placed on the base of the meter, functions as a grip to enable easy insertion of the probes into the wood. The pocket-sized meter measures only 6" x 3" x 1" and weighs 6 ounces.

Wood that is not properly dried is the most common operational problem with solid fuel cooking equipment. The Mini-Ligno E assures that fuelwood has the proper moisture content even before it is unloaded from the truck.
